

Solid Dose Operations E-Learning

**Techceuticals is a worldwide
Provider of solutions for
tablet & capsule
manufacturing operations;
Developed and tested over many
years with proven results.**

ROI - *Return On Investment*

- Increased Productivity
- Fewer Deviations
- Higher Quality
- Reduced Defects
- Less Employee Turnover
- Better Communications

Customers are Saying...

"I've learned more in a few days, than I have over the last 10 years"

"Useful for my entire team! My team can put to use immediately!"

"It should be a requirement"

"A great program"

"Finally, a program that works for my entire team"

Solid Dose E-Training

Using animated sequences, video, and photography to establish effective procedures makes this training as close to hands-on real life training as anyone can get.

The objective is to accelerate the learning process, reduce the learning curve, and put the entire team on the same page.

Each topic has been carefully developed to present the key elements of each unit operation. The participant will understand the theory of how things work in each unit operation, and common practices used.

Review the topic, take the test, and receive a certificate of achievement.

This training series will compliment and enhance ongoing training requirements. Each program can be viewed and executed by individuals, or the entire team.

The results will be a better understanding of the theory of each operation with emphasis on the “must haves” for solid dose manufacturing.

*Individuals or teams can review
and apply to their manufacturing experience*

E-Learning

Individuals can select on-line training topics and receive a certificate of completion

Team Training

Individual unit operation or the entire process. These programs can be presented to individuals, or to any size team.

Certification

Enhanced programs for trainer and trainee certification are now available.

Unit Operations

- Receiving
- GMP Environment
- Weighing
- Milling and Screening
- Blending
- Compression
- Tooling
- Film Coating
- Encapsulation

Solid Dose Operations

Units of operation in solid dose manufacturing are driven by setup, operation, cleaning and maintenance procedures. However, each operation is dependent on the one before it and success is cumulative. Results come from understanding the complete process. This program is designed to promote discussion and interaction between each of the manufacturing areas.

Techceuticals Solid Dose Training Facility

Benefits

On-Boarding: Immediate emerson and common nomenclature are the goals of this introduction. New employees need exposure to the entire process and to understand the way they perform determines impact product quality to assure that the products produced are safe, pure, and effective. These programs provide a step by step, easy to follow approach.

Experienced Employees: Customers are finding that people with many years of experience find a great deal of value in these presentations. These programs help to refresh experienced employees in areas they may not be exposed to on a regular basis. We have found that many experienced employee may not want to admit they don't know something and this is a way to give them the opportunity to learn and ask questions. While at the same time they are exposed to the learning materials provided to new employees. The result is the entire team learns.

Everyone in manufacturing environment: This program is designed for the entire manufacturing team: R&D, Tech Services, Engineering, Maintenance, Operators, Leads, Supervisors, Managers, and QA/QC teams will all benefit.

Updates

The great thing about this e-training program is that there will be ongoing updates and scheduled changes to keep the information interesting and challenging.
